

Virtus Core

Project Canon (RC1)

Living technical source of truth for Owner / CTO / Investor
Read in ~30 minutes. Update after each major stage.

Version v1.0 | 2026-07-23

Status: RC1 TECHNICAL PASS / RELEASE HOLD
(push only after clean tree + full pytest green + Release Approved)

Document ID: VIRTUS_CORE_PROJECT_CANON

Version: RC1 / v1.0

Date: 2026-07-23

Audience: Owner | future CTO | investor (30-minute read)

Living rule: After each major stage (G3.x, service lifecycle PASS), bump version (v1.1, v1.2) and regenerate PDF.

Source of truth: this file + stamped facts in docs/COMMERCIAL_VALIDATION.md | docs/RC1_PRODUCTION_RELEASE_NOTES.md

1. Executive Summary

What it is

Virtus Core is a digital company operating system for small businesses: a public storefront of digital services, checkout, client workspace, and Vector - an AI business consultant - under Owner control.

It is not a chat toy. AI is a tool inside the ecosystem.

Mission

"We do not sell websites. We help businesses solve digital problems."

Website | AI assistant | automation | analysis are instruments. The goal is the right outcome for the client and sustainable revenue for Virtus Core.

Vision

A client opens Virtus Core to continue work with their digital company - products, orders, Vector, improvements - not to "try another chatbot".

Permanent principles (non-negotiable)

Principle | Meaning

|-----|-----|

Solve Digital Problems | Recommend repair when honest; new site when better for the client

Don't sell unfinished products | Coming Soon ≠ Buy

AI may recommend. Only the Owner approves | Evolution / platform changes

Auto Apply = false | No silent code changes

Reality over Features | Ship what can be verified on the CEO path

One slice = one commit | Independently revertible

Audience

- DE/EU SMB owners (Path A: landing websites first)
- Owner / CEO (Mission Control, Business Health, Evolution)
- Future operators / CTO / investors reading this Canon

RC1 status (honest)

[HOLD] RC1 - TECHNICAL PASS / RELEASE HOLD

Stages through G3.1 are CEO-stamped. Push held until: clean working tree + full pytest green + Release Approved.

S0 Storefront First committed (fc40e44). Website Analysis v1 - Scope Freeze in progress (may be uncommitted at PDF build time).

2. Product Philosophy

Storefront sells products

->

Vector helps choose (consultant)

->

Checkout only for finished delivery paths

->

Client Workspace continues the project

->

Evolution improves the platform from confirmed experience

Wrong framing: "We have AI - let's talk."

Right framing: "Here are digital solutions. If you need help choosing - ask Vector."

3. Architecture (system map)

Public /site (Storefront)

->

Products | Analysis | Coming Soon honesty

->

Order (/order) | Packages Basic/Business/Premium

->

Payments (Landing Path A | Stripe/sandbox)

->

Client Workspace (/client)

->

Vector (consultant | chat secondary)

->

Mission Control | Business Health (Owner)

->

Evolution Center (/business/evolution)

->

Rule Candidate -> Knowledge Ledger

Launcher law: Genesis.exe = lifecycle only (start/stop/alive). No Git-based product decisions.

Python: backend 3.12 (runtime.txt).

4. Modules (status map)

Module | Purpose | Status | Buy? | Notes

|-----|-----|-----|-----|-----|

Storefront /site | What can I buy? | [OK] S0 | - | Chat secondary (Ask Vector)

Landing Website | Basic 350 | Business 650 | Premium 1200 | [OK] G2.3 | Yes | Path A

Website Analysis v1 | URL -> report -> options | [WIP] Scope | Free diagnostic -> Order website | Repair/SEO Coming Soon

Website Repair | Fix existing site | Coming Soon | No Buy | Priced in catalog

SEO / Speed / Security | Audits & opts | Coming Soon | No Buy | From Analysis recommendations

Factory | Generate landings | [OK] Mission 2 | via Order | Owner/factory tools

Payments | Checkout Path A | [OK] G2.3 | Yes | Landing only

Client Workspace | Client after purchase | [OK] G2.2 | -

Vector | AI Business Employee / consultant | [OK] foundation | Activate / Coming Soon SKUs | Not the first screen

Mission Control | Owner daily path | [OK] | - | Via Genesis.exe

Business Health | Readiness lanes | [OK] | -

Evolution Center | Support -> learn | [OK] G3.1 | - | Owner dual confirm

Knowledge Ledger | Confirmed rules | [OK] G3.1 | - | After 2nd confirm
Marketplace | - | Frozen | - | Not opened

Dependencies (simplified): Storefront -> Order -> Payments -> Client; Analysis -> recommendations -> Order or Coming Soon; Evolution -> Owner -> Ledger (never auto-apply).

5. Commercial model

Buyable today (Path A)

Package | Price | CTA

|-----|-----|-----|

Landing Basic | 350 EUR | Order

Landing Business | 650 EUR | Order (recommended)

Landing Premium | 1200 EUR | Order

Catalogued | Coming Soon (priced, not Buy)

AI Website Analysis (product SKU) | Website Repair | SEO Audit | Speed | Security | Google Business | Migration | Vector
monthly tiers | CRM | Automation - Coming Soon ≠ Buy.

Rule

"Don't sell unfinished products."

6. Customer Journey

Visitor

- > Storefront (/site)
- > (optional) Website Analysis
- > Repair* | SEO* | New Website
- > Checkout
- > Paid
- > Client Workspace
- > Support / Vector
- > (Owner) Evolution learns from confirmed cases

* Coming Soon until delivery lifecycle exists

3-click rule (S0): Home -> Package card -> Order.

7. Business Logic (Analysis -> offer)

Website Analysis

->

Health score + real checks only

->

If site healthy & few issues -> prefer Repair (when available)

If many gaps / repair ≈ new site cost -> prefer Business Website

If SEO/speed only -> SEO/Speed (when available)

->

Always explain why (justification)

->

Never invent check results

Principle: Solve Digital Problems.

8. Vector

Is

- Face of the hired digital team
- Consultant: need -> option -> preview/order
- Secondary on /site (Ask Vector), not the hero

Is not

- Auto-changer of platform code
- Unrestricted marketplace seller
- Replacement for Owner approval on Evolution

Decisions

- Language Constitution (reply language = user messages)
- Public chat via Genesis Brain; Sales Slice B (visual concept) parked until it lives on product cards
- Analysis recommendations use locked prices and Coming Soon honesty

Evolution link

Vector/support may create tickets -> Evolution proposals -> Owner only applies knowledge after dual confirm. Applied = false always for code.

9. Evolution Center

Ticket

- > Analysis
- > Proposal (Confidence | Impact | Rollback | Diff Summary)
- > Owner Approve
- > Rule Candidate
- > Owner Confirm
- > Knowledge Ledger

Mission: make the platform safer/stabler/smarter from confirmed experience - does not invent new product features.

Auto Apply = false (permanent until deliberate review).

10. Security

Gate | Result

|-----|-----|

Security Gate S1 | [OK] FINAL PASS

Permanent suite | scripts/s1_security_regression_suite.py

Freeze | Lifted after S1; Overall never 100% while a lane is yellow

Why: production readiness requires green security lane; every vulnerability -> permanent test.

11. Release History (stamped)

Mission 1 [OK]
G2.1 Public Platform [OK]
G2.2 Client Workspace [OK]
Security Gate S1 [OK] -> cd0142b
G2.3 Commercial Readiness [OK] -> 802838a
Production Ready [OK]
G3.1 Evolution [OK] -> 79a97f7
RC1 notes -> 4209796
S0 Storefront First [OK] -> fc40e44
Website Analysis v1 [WIP] Scope Freeze

RC1 tip for "stages complete" story: through G3.1; S0 is post-G3.1 storefront UX.

12. Diagrams (index)

See sections 3, 6, 7, 9 - keep diagrams ASCII in PDF; Mermaid optional in Markdown viewers.

13. Roadmap

Ready | Not opened / frozen

|-----|-----|

Path A websites + payments | Marketplace
Storefront-first /site | Auto-apply Evolution
Evolution G3.1 | G3.2 until Release Approved
Analysis v1 (in progress) | Full Repair/SEO delivery lifecycles
Payment Hub / Gewerbe until first real client EUR

14. Constraints (do not violate)

1. Don't sell unfinished products
2. AI recommends | Owner approves | Auto Apply = false
3. No Marketplace without explicit Scope Freeze
4. One logical slice = one commit; no WIP in release commits
5. Launcher never uses Git for process control
6. No Brain/Conversation Pipeline rewrites without acceptance gates
7. RC1 push only after Release Approved

15. Appendix (pointers)

Area | Location

|-----|-----|

Commercial canon | docs/COMMERCIAL_VALIDATION.md
RC1 release notes | docs/RC1_PRODUCTION_RELEASE_NOTES.md
Storefront | dashboard/frontend/app/site/SitePage.tsx

Analysis v1 | dashboard/backend/app/integration/website_analysis_v1.py
Evolution | dashboard/backend/app/evolution/
Security suite | scripts/s1_security_regression_suite.py
Public analysis API | POST /api/public/website-analysis
Owner Evolution UI | /business/evolution
Catalog (FE) | dashboard/frontend/app/lib/commercialCatalog.ts
Catalog (BE) | dashboard/backend/app/integration/commercial_catalog_g23.py

Versioning

Version | When

|-----|-----|

v1.0 / RC1 | This document

v1.1+ | After next major PASS (e.g. Analysis FINAL | Repair lifecycle | Release Approved)

Regenerate PDF: py -3.12 scripts/build_project_canon_pdf.py

End of Project Canon RC1 v1.0
